

Bulletin: Address Number Lights

Purpose:

Address number lights illuminate address numbers in order that emergency vehicles find the correct address and provide security lighting for the Neighborhood.

Typical Installation:

Note: While the typical installation is shown above, the following exceptions do occur:
no light switch, no photosensor and/or only one light bulb

Suggestions:

- Use 25 or 40 watt (or equivalent lumen) bulbs
- Consider installing long lasting, energy saving bulbs [e.g. compact fluorescent (CFL) bulbs]
- Install a clear plastic rain hat to keep rain out of light fixture. The rain hat is held in place either by placing a rock on top of the rain hat or by wiring the rain hat to the light fixture
- Ensure the light switch is in "on" position and that the photosensor is working
- Consider using a screw-in photosensor/bulb if the existing installation does not have a photosensor
